

◆ I want to increase material yields!

**I want to reduce the amount of leftover coil material.**

Using an  
ACCESS  
Feeder

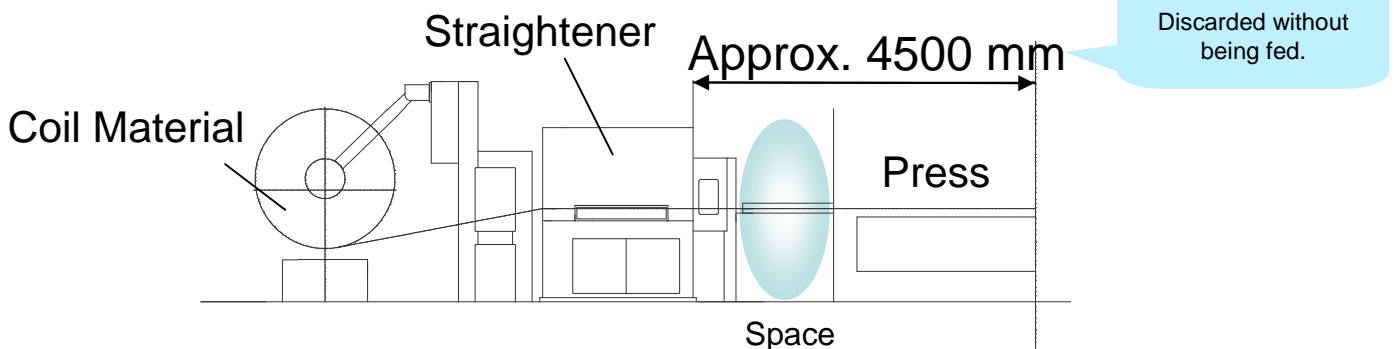

**Leftover material was reduced by 30%!**

■ Customer's Application: Auto Parts

**【Before】**

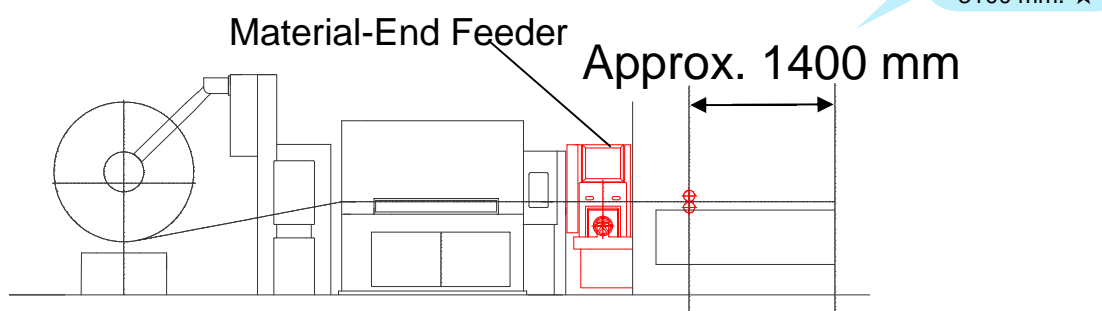

■ Situation Before Consulting with ACCESS, Ltd.: 4500 mm of material at the end of a coil remained unused.

Not only was material being wasted, it was heavy and removing it from the line was also hazardous.

**【Countermeasure】 Installed a material-end feeder by the press.**

The end of the coil is detected at the Material-End Feeder.

**【After】**

Enables the forming of material until the end of the coil is in close proximity to the die.

The leftover material is reduced by 30%.

Please contact  
ACCESS for  
details.
