

◆ I want to increase material yields!

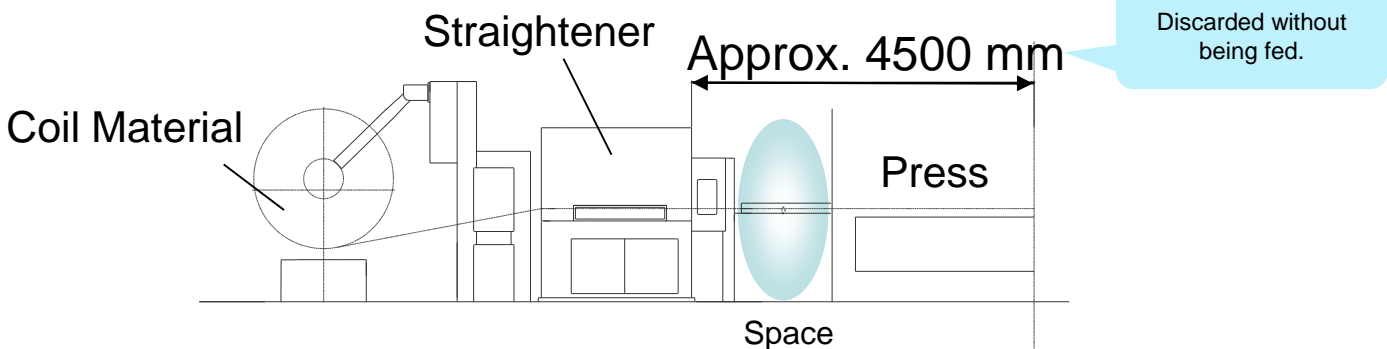

I want to reduce the amount of leftover coil material.

Using an AIDA Feeder

Leftover material was reduced by 30%!

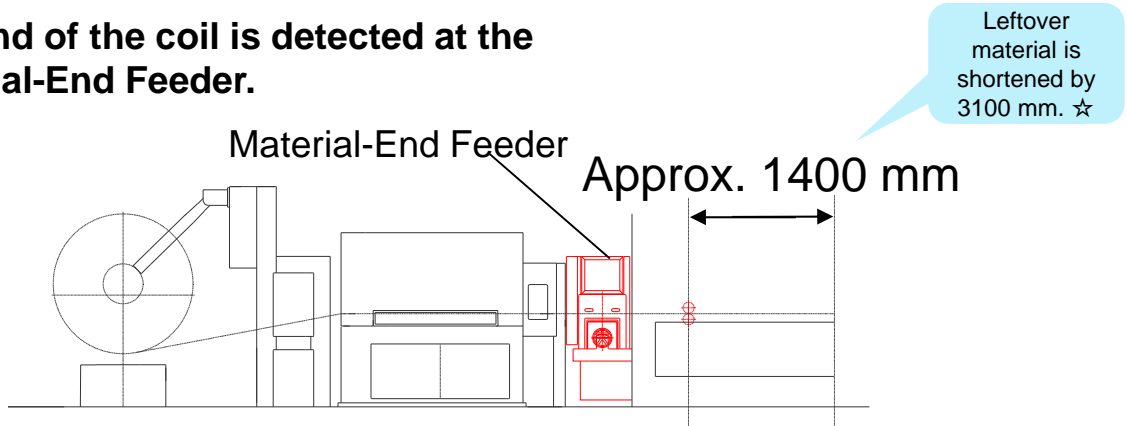

■ Customer's Application: Auto Parts

【Before】
■ Situation Before Consulting with AIDA ENGINEERING, Ltd.:
4500 mm of material at the end of a coil remained unused.
Not only was material being wasted, it was heavy and removing it from the line was also hazardous.

【Countermeasure】 Installed a material-end feeder by the press.

The end of the coil is detected at the Material-End Feeder.

【After】
Enables the forming of material until the end of the coil is in close proximity to the die.
The leftover material is reduced by 30%.

Please contact AIDA for details.
