

◆ I want to increase productivity while using less space

I want to increase productivity in a limited space!

Using an AIDA Piler

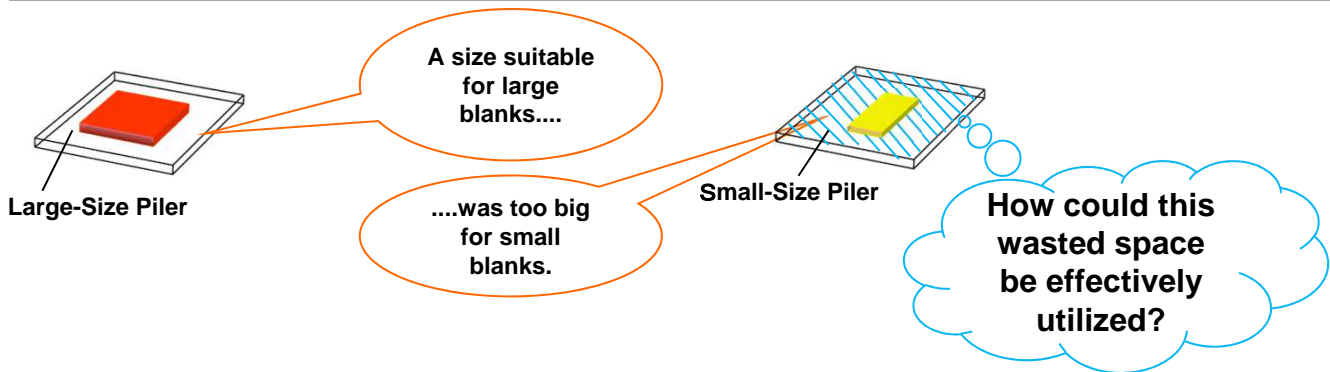

10% increase in productivity in the same space!

■ Customer's Application: Auto Parts

【Before】

■ Situation Before Consulting with AIDA ENGINEERING, Ltd.: The customer wanted to install a double-piler, but there was no room to install it.

The customer wanted to improve productivity in a limited space.

【Countermeasure】 A single piler that could accommodate both single and dual piling was installed.

The lifters were separated, and the customer could select between stacking modes based on the size of the blanks.

【After】

Small blanks were produced using the dual piling mode, so the press no longer had to be stopped when stacks were swapped out.

Achieved a 10% increase in productivity.

Please contact AIDA for details.
