

◆ I want to further reduce manpower on my production lines

I want better to load blank stacks more efficiently.

Reduced manpower requirements by making the loading work more efficient.

Using an ACCESS
Blank Feeder

■ Customer's Application: Auto Parts

【Before】

■ Situation Before Consulting with ACCESS, Ltd.:

Shuttle carts that accommodated 2 stacks were used.

Every time a stack was depleted, new blanks were loaded.

It took approximately 15 minutes to load blank stacks each time, and this was repeated 32 times per day (for a total of 8H/day), and dedicated stack loading personnel were required.

【Countermeasure】 Introduced a rotary index table system

10 stacks can
be preloaded

Please contact
ACCESS for
details.

【After】

Enabled 2-hour non-stop production without loading more blanks!

Instead of loading blank stacks 32 times each day, they were only loaded 4 times each day (once every 2 hours).

Dedicated stack loading personnel were no longer required, enabling personnel to cover multiple lines.
