

◆ I want to reduce manpower on my production lines!

I want to use fewer workers to convey workpieces between presses.

**Using AIDA
Sub-Transfer
Equipment**

■ Customer's Application: Auto Parts

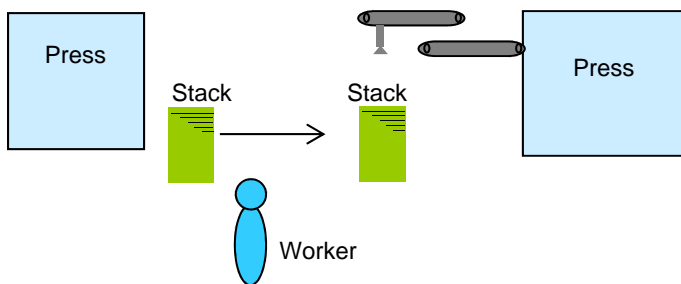

【Before】

■ Situation Before Consulting with AIDA ENGINEERING, Ltd.:

Blanks formed in a blanking press were being supplied to a destack feeder by workers using cranes and forklifts.

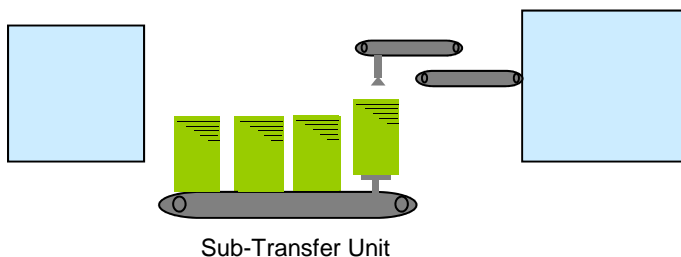

The workers were supplying blanks to the destack feeder.

(Required Time: 5 minutes each time x 16 times per day = 80 minutes)

Hand-fed by workers

【Countermeasure】 Installed a sub-transfer between the presses.

Automated!

【After】

Cranes and forklifts were no longer needed to supply the blanks, enabling workers to do other tasks.

Fewer workers were needed on the line!

**Please contact
AIDA for details.**
